Distinguishing between classical (coherent state mixtures) and quantum drivers in strong-field experiments".

Ahlam Hegazi

Physics Department and the Solid State Institute
Technion

Abstract

Recent theoretical and experimental studies showed that high harmonic generation (HHG) and above threshold ionization (ATI) can be driven by non-classical light, e.g. bright squeezed vacuum. However, all the theoretical studies analyzed these processes by incoherent summation of semi-classical contributions. This raises a pivotal question in the emerging field of strong-light quantum optics: are there quantum signatures in these experiments that cannot be obtained by driven these processes with a mixture of coherent states? I will address this question in my talk and present a proposed ATI experiment that distinguishes between squeezed driver and coherent state mixture driver.

ההרצאה תתקיים ביום המישי, ה-16.5.24 בשעה 12:30

באוڈיטוריום המכון למצב מוצק, קומת כניסה

**The lecture will take place on Thursday, 16.5.24 at 12:30
at the Solid State Institute auditorium, entrance floor**

M.Sc. Student of Professor Oren Cohen
